September 1985

Pesticides used improperly can be injurious to human beings, animals, and plants. Follow the directions and heed all precautions on labels. Store pesticides in original containers under lock and key—out of the reach of children and animals—and away from food and feed.

Apply pesticides so that they do not endanger humans, livestock, crops, beneficial insects, fish, and wildlife. Do not apply pesticides where there is danger of drift when honey bees or other pollinating insects are visiting plants, or in ways that may contaminate water or leave illegal residues.

Avoid prolonged inhalation of pesticide sprays or dusts; wear protective clothing and equipment, if specified on the label.

If your hands become contaminated with a pesticide, do not eat or drink until you have washed. In case a pesticide is swallowed or gets in the eyes, follow the first aid treatment given on the label, and get prompt medical attention. If a pesticide is spilled on your skin or clothing, remove clothing immediately and wash skin thoroughly.

NOTE: Some States have restrictions on the use of certain pesticides. Check your State and local regulations. Also, because registrations of pesticides are under constant review by the U.S Environmental Protection Agency, consult your local forest pathologist, county agriculture agent, or State extension specialist to be sure the intended use is still registered.

CAUTION: PESTICIDES
PREFACE

This report summarizes data on weeds and weed control with herbicides for 1984. The information was collected during 1985 by means of survey forms sent to Federal and State forest and rangeland managers in the United States, Guam, and Puerto Rico. The material was gathered by the USDA Forest Service in cooperation with the Agricultural Research Service.

For information contact:

Dennis R. Hamel   (703) 235-8209
Charles I. Shade (703) 235-8209

SUMMARY

Respondents to the survey analyzed in this publication provided data on current distributions of weeds and on weed control using herbicides on lands they managed. They also estimated trends of weeds inadequately controlled at present and indicated specific needs for better control technology.

The survey indicated that in forestry the following weeds will continue to be significant, judged by current infestation patterns and difficulty of control: grasses, ceanothus, purslane, bindweed, alder, nutsedge, kudzu, pigweed, leafy spurge, and Canadian thistle.

On rangeland significant weeds are leafy spurge, thistles, knapweeds, rabbitbrush, and tansy ragwort.

Noncropland associated with public lands face problems with sassafras, persimmon, Canadian thistle, kudzu, Johnsongrass, and leafy spurge.

Where crops are grown on public lands to enhance wildlife habitat or maintain historic settings a number of weeds have resisted control: Johnsongrass, cocklebur, bindweed, cheatgrass, foxtail, and Canadian thistle.

Forest managers report as important newer herbicides: glyphosate, hexazinone, oxyflourfen, and triclopyr. They continue to use 2,4-D and picloram, but request new technology in the form of better chemical, biological, and integrated pest management techniques.

Rangeland managers expect to continue the use of 2,4-D, picloram, glyphosate, dicamba, tebuthiuron, and combinations of these. New technology is sought in biological controls and combinations of techniques in integrated pest management.

Cropland weeds show resistance to control even when atrazine, 2,4-D, trifluralin, glyphosate, and alachlor re used. Consequently, land managers would like improved technology, especially in the areas of chemical and biological control.

PURPOSE

In 1985 the USDA Forest Service (FS) agreed to cooperate with the
Agricultural Research Service (ARS) in collecting data for a revision of a
publication entitled "Extent and Cost of Weed Control with Herbicides and an
Evaluation of Important Weeds, 1968" (ARS-H-1). ARS-H-1 has been used in
planning, funding, and directing vegetation management programs in the
United States for the past 17 years. The revision was considered necessary
because of numerous changes in the information since the last edition. This
report summarizes data collected on State and Federal forest and rangeland
by the Forest Service.

1

SURVEY FORMS AND THEIR DISTRIBUTION

The task of the FS was to gather data on weeds and herbicides important to
Federal and State forest and rangeland management. Survey forms
(Figure 1) were sent to all State Foresters in the U.S., Guam, and Puerto
Rico. Forms were also sent to the administrators of selected Federal land
management agencies which are listed in Table 1. Although all Federal land
managers using herbicides were not surveyed, the data collected represents
about 99 percent of Federal land area. A total of 531 forms were returned
to the FS. They provide data on a wide variety of land management
activities on Federal and State lands.

DATA COLLECTION AND ANALYSIS

Initially an effort was made to determine total acreage affected by weeds
and treated with herbicides. This proved impossible because of the great
variety of management practices used by Federal and State land managers in
different geographic areas. For instance, an acre of corn grown for
wildlife purposes in a game preserve is managed quite differently from an
acre of corn grown for human or domestic animal consumption. Similarly, an
acre of woodland in the southeast is managed in a different way from an acre
of trees in the northwest. Further, given a million acres of National
Forest land, only half may be actually under "management," and of this half,
only 500 acres may be treated in any one year. In some instances
considerable acreage is unavailable for treatment because of legislative
mandates or agency policy. For instance, in designated Wilderness Areas and
in some National Parks certain management practices are restricted oreven
prohibited.

There is another consideration that makes the analysis of acreages confusing
and causes simple mathematical calculations of them to be misleading. Of
the millions of acres of National Forest System (NFS) land, only about
one-tenth of one percent is treated with herbicides each year. Dividing
total NFS acreage by the amount of herbicide used results in a figure that
greatly understates the benefits of herbicide use. This is generally true
of all Federal lands as well as forested State and private land; so this
summary does not include percentages of acreage treated. It does provide
data, state by state, on total land acreage, total Federal land area,
rangeland, forest land, and commercial forest land by ownership (Table 2).

The significance of weeds and the importance of herbicides on this acreage
in these categories is highly variable. The following tables should,
however, provide some insights into the extent and kinds of weeds in the
U.S. and the herbicides used in their control.

Figure 1

WEED SURVEY FOR 1984

REPORTED BY (1)_____   STATE_____

DEPARTMENT/AGENCY (2)_____   CROP OR AREA (3)_____

PHONE NUMBER (   )   -_____   ACREAGE (4)_____

   (1)   Please use last name first followed by initials.
   (2)   Give complete abbreviations, e.g. USDI-BLM.
   (3)   Survey sheets are provided for important crops in
        your State. Extras are provided in case of omissions,
        etc. See appendix C for area designations.
   (4)   If not provided, please insert number of acres and
        give source of information.

A. List up to 5 individual herbicides or herbicide combinations used most widely
(Use WSSA common names given in Appendix B)

Herbicide or Combination (5)	% Crop Acreage Treated	Average Application Rate–1b/A (6)	Expected Use Trend (7)
1.			
2.			
3.			
4.			
5.			

   (5)   Combinations include formulated mixes and tank mixes.
        Write as X + Y.
   (6)   Active ingredient basis. For multiple applications, put
        number of applications in parentheses following rate,
        e.g 3 (2). For combinations, write as 1 + 2. Put number of
        applications in parentheses following rate, e.g. 1 + 2 (2).
   (7)   Use 1 = stationary, 2 = up, 2 = down.

B. List up to 5 weeds which are inadequately controlled with available technology.
(Priority Order) - (Use common names given in Appendix A)

Weed	% Acreage Infested	Intensity Trend (8)
1.		
2.		
3.		
4.		
5.		

   (8)   Trend in weed-stand desnity since 1980. Use 1 = stationary,
        2 = up, 3 = down.

4

C. Assessment of Weed Control Technology

	Current Practice % of acres (9)	Need for Better Technology Use 1-10 Rating (10)
1. Conservation tillage (practices which both minimize soil distrubance and leve surface residue)		
2. No-till (means no distrubance from harvest to next planting, includes strip planting, i.e. tilling only row at planting and ridge planting, i.e. forming and planting on a ridge)		
3. Mechanical (cultivating, hoeing, mowing, brush cutting, etc.)		
4. Cultural (fertilization, crop rotation, grazing management, etc.)		
5. Chemical		
6. Biological (includes use of parasites, predators, and pathogens only)		
7. Integrated Weed Management (systems where two or more weed control technologies used in combination)		
8. List and rate other weed technology needs (e.g. application equipment) a._____ b._____ c._____ d._____		

(9) Proportion of acres practice now used on.
(10) Scale 1-10; 1 = not necessary or not applicable to 10 urgent.

If questions arise, please call Fred Honing or
Dennis Hamel (703) 235-8209

Please complete and return by March 15, 1985

Table 1. Federal Land Management Agencies.

Surveyed Federal Agencies	Acreage Administered[1] (Thousands)
USDA – Forest Service	192,074
Department of Energy – Bonneville Power Administration	14
Tennesee Valley Authority	1,010
Department of the Interior:	
Bureau of Indian Affairs	3,017
Bureau of Land Management	341,059
Fish and Wildlife Service	84,907
National Park Service	77,286
Department of Defense	22,888
Subtotal	722,255
Other Federal Agencies[2]	7,566
Grand Total	729,821

[1]Data from "Public Land Statistics - 1983", U.S. Department of the Interior, Bureau of Land Management, April 1984.

[2]In sending out survey forms to Federal land management agencies no attempt was made to contact all herbicide users. The agencies contacted represent 99 percent of the Federal land management area. The Bureau of Reclamation (which administers over 4 million acres) was not contacted but should be considered for future updates. A good summary of weeds associated with Bureau of Reclamation lands appears in their Herbicide Manual (See References).

[1]Land (exclusive of water) areas from " Public Land Statistics, 1983, U.S. Department of the Interior, Bureau of Land Management, April 1983. [2]Forest and Rangeland areas from "An Analysis of the Timber Situation in the U.S., 1952-2030. Forest Resource Rpt. No. 23, USDA, Forest Service, 1982. [3]Commercial Forest land is capable of producing 20 cubic feet of wood per acre per year. [4]Abbreviations: NFS=National Forest System; Ind.=Industry; and NIPF=Non-Industrial private forest.

Major Categories. Although the information requested by the FS primarily concerned weeds, trees and herbicides used in association with forest and rangeland management, many respondents reported other areas of weed infestation and herbicide use. Because most public lands are managed for multiple uses, reports included such activities as rights-of-way and wildlife habitat management, food and forage production, aquatic weed control, Christmas tree plantations, and fuelbreak maintenance. These data were collated into four major categories, each with several subdivisions. Table 3 indicates these groupings. When respondents listed a major category only, without designating a subdivision, the category "general" was used.

Weeds. Tables 4 through 7 are lists of the most undesirable weeds by commodity and subdivision. The lists are alphabetized by common name, with scientific equivalents also given. Federal and State land managers determined that these weeds are the most undesirable and, in addition, inadequately controlled with current technology relative to their various vegetation management programs.

The relative significance of the identified undesirable weeds was calculated in the following manner. Respondents indicated weed trends as stationary (1), up (2), or down (3). For each weed the number of responses in each of the trend categories was tallied. Then the number of 1's (stationary trend) was multiplied by 2; the number of 2's (up trend) was multiplied by 3; and the number of 3's (down trend) was multiplied by 1. The sum of these numbers for each weed indicated its relative trend.

To determine the relative undesirability of each weed, numerical values from 1 to 5 were assigned in inverse order to the priorities established by survey respondents. For example, weeds at the top of the priority list (first in undesirability) were assigned a value of 5; weeds of least priority (fifth in undesirability) were assigned a value of 1.

In tabular form:

Weed Priority		Value		Scale
1	assigned	5	=	most undesirable
2	assigned	4		
3	assigned	3		
4	assigned	2		
5	assigned	1	=	least undesirable

The sum of the values for each weed indicated its relative priority.

By adding the trend values (calculation of stationary, up, or down trends) and priority values (calculation of undesirability) for each weed, the weeds associated with Federal and State management activities can be prioritized. Tables 8 through 11 display weeds in each subdivision listed by priority according to their mathematically calculated order.

In addition, the calculations for weeds in each subdivision described above were used to determine the 10 highest ranked weeds in the four major categories. This rank, therefore, is a function of both trend and undesirability. These are listed in Table 12. The subdivisions listed in parentheses are the ones in which that weed ranked highest.

Table 3. Categories of Data Collected by the Forest Service to Determine
Extent of Weeds and Herbicide Use on Federal and State Lands.

Forestry	Rangelands	NonCrop Areas	Croplands
General	General	General	General
Site Preparation	Arid	Aquatic Areas	Alfalfa/Hay
Release	Foothill	Firebreaks	Barley

Seed Orchards

Autumn olive
   (Eleagnus umbellata)
Bracken fern
   (Pteridium sp.)
Canadian thistle
   (Cirsium arvense)
Grasses
   (Various species)
Mimosa
   (Mimosa sp.)
Snowberry
   (Symphoricarpus sp.)
Spotted knapweed
   (Centaurea maculosa)
White clover
   (Trifolium sp.)

Christmas Tree Plantations

Blackgum
   (Nyssa sylvatica)
Canadian thistle
   (Cirsium arvense)
Dogbane
   (Apocynum sp.)
Leafy spurge
   (Euphorbia esula)
Orchard grass
   (Dactylis glomerata)

Christmas Tree Plantations (Cont.)

Redroot pigweed
   (Amaranthus sp.)
Rye
   (Lolium perenne)
Vetch
   (Vicia sp.)

Nurseries

Canadian thistle
   (Cirsium arvense)
Carpetweed
   (Mollugo verticillata)
Chickweed
   (Stellaria media)
Dandelion
   (Taraxacum officinale)
Field bindweed
   (Ipomoea sp.)
Foxtail
   (Setaria sp.)
Grasses,

      (Echinochloa crus-galli)
   Bromegrass
      (Bromus sp.)
   Centipedegrass
      (Eremochloa ophiuroides)
   Cheatgrass
      (Bromus secalinus)
   Crabgrass,
      (Digitaria spp.)
      Giant
         (D. longifolia)
      Slender
         (D. filiformis)
Groundsel
   (Senecio vulgaris)
Henbit
   (Lamium amplexicaule)
Lambsquarters
   (Chenopodium album)
Mallow,
   (Malva spp.)
   Common
      (M. neglecta)
   Little
      (M. parviflora)
   Roundleaf
      (Malva sp.)

Table 4 (Cont.)

Nurseries (Cont.)

Mustard
  (Brassica sp.)
Nutsedge,
  (Cyperus spp.)
    Purple
      (C. rotundus)
    Yellow
      (C. esculentus)
Pigweed,
  (Amaranthus spp.)
    Prostrate
      (A. blitoides)
    Redroot
      (A. retroflexus)
Poverty weed
  (Monoleopis nuttalliana)
Puncturevine
  (Tribulus terrestris)
Purslane
  (Portulaca oleracea)
Pusley
  (Richardia sp.)
Redstem filaree
  (Erodium cicutarium)
Sandbur
  (Cenchrus sp.)
Sandspurry
  (Spergula sativa)
Sheep's sorrel
  (Rumex sp.)
Sheperd's purse
  (Capsella bursa-pastoris)
Spurge,
  (Euphorbia spp.)
    Leafy
      (E. esula)
    Prostrate
      (E. humistrata)
    Spotted
      (E. maculata)
Wild Geranium
  (Geranium sp.)
White clover
  (Trifolium sp.)
Whitehorse nettle
  (Urtica sp.)

Table 5. Weeds Associated with Rangeland Management that are Inadequately Controlled with Current Technology.

General

Deerbrush ceanothus
  (Ceanothus integerrimus)
Dyers woad
  (Isatis tinctoria)
Field bindweed
  (Ipomoea sp.)
Goatweed
  (Hypericum perforatum)
Grasses,
  (Various species)
  Beargrass
    (Xerophyllum tenax)
  Cheatgrass
    (Bromus secalinus)
  Johnsongrass
    (Sorghum halepense)
  Peppergrass
    (Lepidium sp.)
  Quackgrass
    (Agropyron repens)
Halogeton
  (Halogeton glomeratus)
Hounds tongue
  (Cynoglossum officinale)
Juniper,
  (Juniperus spp.)
  Alligator
    (J. pachyphloea)
  Utah
    (J. utahensis)
Knapweed,
  (Centaurea spp.)
  Diffuse
    (C. diffusa)
  Russian
    (C. repens)
  Spotted
    (C. maculosa)
Leafy spurge
  (Euphorbia esula)
Medusahead
  (Elymus caput-medusae)
Orange sneezeweed
  (Helenium hoopesii)
Pigweed
  (Amaranthus sp.)
Purple loosestrife
  (Lysimachia sp.)

General (Cont.)

Rhododendron
  (Rhododendron sp.)
Rubber rabbitbrush
  (Chrysothamnus nauseosus)
Russian olive
  (Eleagnus angustifolia)
Sagebrush
  (Artemisia sp.)
Salal
  (Gaultheria shallon)
Saltcedar
  (Tamarix ramosissma)
Scrub oak
  (Quercus sp.)
Siberian elm
  (Ulmus pumila)
Tamarisk
  (Tamarix sp.)
Tanoak
  (Lithocarpus sp.)
Thistle,
  (Various species)
  Canadian
    (Cirsium arvense)
  Musk
    (Carduus nutans)
  Musk nodding
    (Carduus sp.)
  Plumeless
    (Carduus acanthoides)
  Scotch
    (Onopordum acanthium)
Toadflax,
  (Linaria spp.)
  Dalmation
    (L. dalmatica)
  Yellow
    (L. vulgaris)
Whitetop
  (Cardaria sp.)
Wormwood sage
  (Artemisia sp.)
Wyethia
  (Wyethia sp.)

Arid

Camelthorn
  (Alhagi pseudalhagi)

Table 5 (Cont.)

Arid (Cont.)

Dalmatian toad-lax
  (Linaria dalmatica)
Field bindweed
  (Ipomoea sp.)
Mediterranean sage
  (Salvia aethiopsis)
Mesquite
  (Prosopis sp.)
Russian knapweed
  (Centaurea repens)
Saltcedar
  (Tamarix ramosissima)
Tarweed
  (Madia sp.)
Thistle,
  (Various species)
  Canadian
    (Cirsium arvense)
  Yellow star-
    (Centaurea solstitialis)
Turbinella oak
  (Quercus turbinella)
Utah juniper
  (Juniperus utahensis)

Foothill

Dyers woad
  (Isatis tinctoris)
Knapweeds
  (Centaurea spp.)
Leafy spurge
  (Euphorbia esula)
Medusahead
  (Elymus caput-medusae)
Mediterranean sage
  (Salvia aethiopsis)
Scotch broom
  (Cytissus scoparius)
Skeletonweed
  (Lygodesmia juncea)
Tansy ragwort
  (Tanacetum vulgare)
Yellow starthistle
  (Centaurea solstitialis)

Mountain

Klamath weed
  (Hypericum perforatum)
Knapweeds
  (Centaurea spp.)
Leafy spurge
  (Euphorbia esula)
Marlahan mustard
  (Brassica sp.)
Tansy ragwort
  (Tanacetum vulgare)
Thistle,
  (Various species)
  Canadian
    (Cirsium arvense)
  Yellow star-
    (Centaurea solstitialis)
Whitetop
  (Cardaria sp.)
Willow
  (Salix spp.)

Rainbelt

None reported

Table 6. Noncrop Weeds Associated with Federal Lands that are Inadequately
Controlled with Current Technology.

General

Beefwood or Australian Pine
  (Casuarina sp.)
Berries
  (Rubus spp.)
Black locust
  (Robinia pseudoacacia)
Broadleaf plantain
  (Plantago major)
Cattails
  (Typha spp.)
Chickweed
  (Stellaria sp.)
Curly dock
  (Rumex crispus)
Dalmation toadflax
  (Linaria dalmatica)
Dandelion
  (Taraxacum officinale)
Elephant grass
  (Pennisetum purpureum)
Field bindweed
  (Ipomoea sp.)
Firetree
  (Nuytsia floribunda)
Foxtail
  (Setaria sp.)
Giant cane
  (Arundinaria gigantea)
Gorse
  (Ulex europaeus)
Grasses,
  (Various species)
  Annual
    (Various species)
  Bermudagrass
    (Cynodon dactylon)
  Crabgrass
    (Digitaria spp.)
  Dallasgrass
    (Paspalum dilatatum)
  Guineagrass
    (Panicum maximum)
  Johnsongrass
    (Sorghum halepense)
  Kentucky fescue
    (Festuca sp.)
  Kikuyugrass
    (Pennisetum clandestinum)
  Quackgrass
    (Agropyron repens)

General (Cont.)

Honeysuckle
  (Lonicera sp.)
Jimsonweed
  (Datura stramonium)
Juniper
  (Juniperus sp.)
Kahili ginger
  (Zingiber sp.)
Knapweed,
  (Centaurea spp.)
  Diffuse
    (C. diffusa)
  Russian
    (C. repens)
  Spotted
    (C. maculosa)
Koa-haole
  (Leaucana glauca)
Kudzu
  (Pueraria lobata)
Lambsquarters
  (Chenopodium album)
Leafy spurge
  (Euphorbia esula)
Melaleuca
  (Melaleuca sp.)
Mugwort
  (Artemisia vulgaris)
Peppertree
  (Schinus sp.)
Persimmon
  (Diospyros sp.)
Pigweed
  (Amaranthus sp.)
Poison ivy
  (Rhus radicans)
Poplar
  (Populus trichocarpa)
Prickly sida
  (Sida spinosa)
Ragweed
  (Ambrosia sp.)
Reeds
  (Phragmites spp.)
Rush skeletonweed
  (Chondrilla juncea)
Sandbur
  (Cenchrus sp.)

Table 6 (Cont.)

General (Cont.)

Sassafras
(Sassafras albidum)
Scotch broom
(Cytissus scoparius)
Tamarisk
(Tamarix sp.)
Thistle,
(Various species)
Canadian
(Cirsium arvense)
Russian
(Salsola iberica)
Yellow star-
(Centaurea solstitialis)
Wild millet
(Panicum sp.)
Wild onion
(Allium canadense)
Willow
(Salix sp.)
Yellow nutsedge
(Cyperus esculentus)
Yerba santa
(Anemopsis sp.)

Aquatic Areas

Algae
(Spirogyra & Cladophora spp.)
Arrowweed
(Peltandra virginica)
Cattails
(Typha sp.)
Giant cutgrass
(Leersia sp.)
Grasses
(Various species)
Hardstem bulrush
(Scirpus sp.)
Hydrilla
(Hydrilla verticillata)
Jointgrass
(Equisetum sp.)
Naiad,
(Najas spp.)
Southern
(N. guadalupensis)
Spinyleaf
(Najas sp.)
Poison hemlock
(Cicuta sp.)
Purple loosestrife
(Lysimachia sp.)

Aquatic Areas (Cont.)

Reeds
(Phragmites sp.)
Reed canarygrass
(Phalaris arundinacea)
Saltcedar
(Tamarix sp.)
Sourwood
(Oxydendrum sp.)
Thistle,
(Various species)
Canadian
(Cirsium arvense)
Scotch
(Onopordum acanthium)
Waterchestnut
(Trapa natans)
Watermilfoil
(Myriophyllum spicatum)

Firebreak Maintenance Areas

Chamise
(Adenstoma sp.)
Scrub live oak
(Quercus virginiana)

Lawns

Nutsedge
(Cyperus sp.)

Noxious Weeds

Dyers woad
(Isatis tinctoria)
Johnsongrass
(Sorghum halepense)
Knapweed,
(Centaurea spp.)
Diffuse
(C. diffusa)
Russian
(C. repens)
Spotted
(C. maculosa)
Leafy spurge
(Euphorbia esula)
Multifora rose
(Rosa multiflora)

Table 6 (Cont.)

Noxious Weeds (Cont.)

Poison oak
  (Rhus toxicodendron)
Scotch broom
  (Cytissus scorparius)
Skeletonweed
  (Lygodesmia juncea)
St. Johnswort (Klamath weed)
  (Hypericum perforatum)
Tansy ragwort
  (Senecia jacobaea)
Thistle,
  (Various species)
  Canadian
    (Cirsium arvense)
  Musk
    (Carduus nutans)
  Yellow star-
    (Centaurea solstitialis)
Toadflax,
  (Linaria spp.)
  Dalmation
    (L. dalmatica)
  Yellow
    (L. vulgaris)

Ornamentals

Henbit
  (Lamium amplexicaule)
Chickweed
  (Stellaria sp.)
Virginia creeper
  (Parthenocissus quinquefolia)
Field bindweed
  (Ipomoea sp.)

Pasture

Canadian thistle
  (Cirsium arvense)
Goldenrod
  (Solidago sp.)
Himalaya blackberry
  (Rubus sp.)
Johnsongrass
  (Sorghum halepense)
Multiflora rose
  (Rosa multiflora)
Soft rush
  (Juncus effusus)

Wildlife Habitat Management Areas

Black locust
  (Robinia pseudacacia)
Coontail
  (Ceratophyllum demersum)
Kochia
  (Kochia scoparia)
Leafy spurge
  (Euphorbia esula)
Purple loosestrife
  (Lysimachia sp.)
Thistles
  (Various species)
Watermilfoil
  (Myriophyllum sp.)

Rights-of-Way

Alder,
  (Alnus spp.)
  Red
    (A. rubra)
  Sitka
    (A. sitchensis)
Bigleaf maple
  (Acer macrophyllum)
Blackberry
  (Rubus sp.)
Douglas-fir
  (Pseudotsuga menziesii)
Horsetail
  (Equisetum sp.)
Knapweed,
  (Centaurea spp.)
  Diffuse
    (C. diffusa)

Table 7. Weeds Associated with Crops on Federal Lands that are Inadequately Controlled with Current Technology.

General

Cocklebur
  (Xanthium sp.)
Field bindweed
  (Ipomoea sp.)
Foxtail
  (Setaria sp.)
Grasses,
  (Various species)
  Annual
    (Various species)
  Bromegrass
    (Bromus sp.)
  Fescue
    (Festuca sp.)
  Johnsongrass
    (Sorghum halepense)
  Mannagrass
    (Glyceria septentrionalis)
  Pigeongrass
    (Setaria sp.)
Hemp sesbania
  (Sesbania exalta)
Jimsonweed
  (Datura stramonium)
Knapweed
  (Centaurea spp.)
Kochia
  (Kochia sp.)
Lambsquarters
  (Chenopodium sp.)
Pigweed
  (Amaranthus sp.)
Sandbur
  (Cenchrus sp.)
Sicklepod
  (Cassia obtusifolia)
Sunflower
  (Helianthus sp.)
Velvetleaf
  (Abutilon theophrasti)
Vetch
  (Vicia sp.)
Wild garlic
  (Allium vineale)
Wild mustard
  (Sinapis arvensis)
Wild oats
  (Avena fatua)
Wild onion
  (Allium canadense)
Yellow nutsedge
  (Cyperus esculentus)

Alfalfa and Hay

Bluegrass
  (Poa sp.)
Canadian thistle
  (Cirsium arvense)
Field bindweed
  (Ipomoea sp.)
Forbs
  (Various species)
Kochia
  (Kochia sp.)
Ryegrass
  (Lolium sp.)
Sunflower
  (Helianthus sp.)
Tansy ragwort
  (Senecio jacobaea)
Volunteer corn
  (Zea mays)
Watergrass
  (Echinochloa oryzoides)
Wild mustard
  (Sinapis arvensis)

Barley

Field bindweed
  (Ipomoea sp.)
Foxtail barley
  (Hordeum jubatum)
Grasses,
  (Various species)
  Quackgrass
    (Agropyron repens)
  Pigeongrass
    (Setaria sp.)
Kochia
  (Kochia sp.)
Lambsquarters
  (Chenopodium sp.)
Spotted knapweed
  (Centaurea maculosa)
Sunflower
  (Helianthus sp.)
Thistle,
  (Various species)
  Canadian
    (Cirsium arvense)
  Sow-
    (Sonchus sp.)
Tumble mustard
  (Sisymbrium altissimum)
Whitetop
  (Cardaria sp.)

Table 7 (Cont.)

Barley (Cont.)

  Wild oats
    (Avena fatua)

Beans

  Canadian thistle
    (Cirsium arvense)
  Field bindweed
    (Ipomoea sp.)
  Forbs
    (Various species)
  Volunteer corn
    (Zea mays)

Citrus

  Paragrass
    (Brachiara mutica)
  Peppertree
    (Schinus sp.)

Corn

  Common cocklebur
    (Xanthium sp.)
  Fall panicum
    (Panicum dichotomiflorum)
  Field bindweed
    (Ipomoea sp.)
  Foxtail,
    (Setaria spp.)
    Giant
      (S. faberia)
    Green
      (S. viridis)
    Yellow
      (S. glauca)
  Foxtail barley
    (Hordeum jubatum)
  Grasses,
    (Various species)
    Crabgrass
      (Digitaria sp.)
    Johnsongrass
      (Sorghum halepense)
    Pigeongrass

  (Abutilon theophrasti)

Table 8.   Prioritized List of Weeds Associated with Forestry Activities on Federal and State Lands that are Inadequately Controlled with Current Technology.

General

Kudzu
Leafy spurge
Canadian thistle
Japanese honeysuckle
Thimbleberry
Red maple
Salmonberry
Blackberry
Sweetgum
Purple loosestrife
Russian thistle
Sweet clover
Ceanothus
Bigleaf maple
Grasses
Broomsedge
Gallberry
Grapevine
Hickory
Tanoak
Field bindweed
Sugar maple
Reedgrass
Manzanita
Oak
Passion flower
Wax myrtle
Bitter cherry
Foxtail
Pinegrass
Greenbriar
Horseweed
Koster's curse
Myrtle (sweet bay)
Rhododendron
Sierra chinquapin
Yellow starthistle
Sweet fern
Black locust
Multiflora rose
Huckleberry
Buckthorn
Elksedge
Silvergrass
Hophornbeam
Marijuana

Table 12. Ten Highest Ranked Undesirable Weeds[1] in Each of the Four Major Public Land Management Categories.

Category	Weed and Subdivision [2]
Forestry	Grasses (Site Preparation/Release)
	Ceanothus (Site Preparation)
	Purslane (Nurseries)
	Field bindweed (Nurseries)
	Red alder (Site Preparation/Release)
	Yellow nutsedge (Nurseries)
	Kudzu (General forestry)
	Redroot pigweed (Nurseries)
	Leafy Spurge (General forestry)
	Canadian thistle (General forestry)
Range	Leafy spurge (General, Foothill, Mountain)
	Canadian thistle (General, Mountain)
	Spotted knapweed (General)
	Musk thistle (General)
	Russian knapweed (General, Arid)
	Rubber rabbitbrush (General)
	Knapweeds (Foothill, Mountain)
	Scotch thistle (General)
	Tansy ragwort (Foothill, Mountain)
	Yellow starthistle (Arid, Foothill, Mountain)

Category	Weed and Subdivision [2]
Noncrop Areas	Sassafras (General)
	Persimmon (General)
	Canadian thistle (General)
	Kudzu (General)
	Johnsongrass (General)
	Leafy spurge (Noxious Weeds)
	Crabgrass (General)
	Purple loosestrife (Aquatic areas)
	Poison ivy (General)
	Thistles (General)
Croplands	Johnsongrass (General, Corn, Soybeans)
	Cocklebur (General, Soybeans, Corn)
	Field bindweed (General, Wheat)
	Cheatgrass (Wheat)
	Foxtail (Corn)
	Velvetleaf (Soybeans)
	Canadian thistle (Wheat)
	Kochia (Barley, Wheat)
	Wild oats (Barley)
	Sicklepod (General)

[1]Highest ranked weeds in order of priority were determined by those ranking highest in combined trend and priority when all subdivisions within the category were considered.
[2]The subdivision(s) in which the named weed ranked highest are indicated in parentheses.

31

Herbicides. Analyses of herbicides used for weed control have been conducted in a fashion similar to those performed on the weeds themselves. The data used for the calculations were collected on the same survey forms (Figure 1) as those that provided the data on weeds, and have the same limitations previously noted.

Tables 13 through 16 are alphabetical lists of herbicides used for weed control in forestry, in range management, in non-crop management, and in cropland management. All of the herbicides are listed by common name of their active ingredients as listed in "Farm Chemicals Handbook '85," and the "Herbicide Handbook" of the Weed Science Society of America - 1983.

Respondents indicated expected trends in herbicide usage as stationary (1), up (2), or down (3). Note that these are judgements of anticipated usage: indicating (1) no change from present usage, (2) increased usage, or (3) decreased usage. For each herbicide the number of responses in each of the trend categories was tallied. Then the number of 1's was multiplied by 2, the number of 2's was multiplied by 3, and the number of 3's was multiplied by 1. The sum of these numbers for each herbicide indicated its relative usage trend.

To determine the relative importance of each herbicide, they were prioritized according to the amount of acreage on which they are currently used. The herbicide used on the greatest number of acres received a 5; the one used on the least number of acres, a 1. Numerical values from 5 to 1 were assigned in that manner.

The sum of the values for each herbicide indicates its relative priority.

By adding the usage trend values and priority values for each herbicide, the herbicides used for weed control in Federal and State management activities can be prioritized. Tables 17 through 20 display herbicides in each subdivision listed by priority according to their mathematically calculated order.

In addition, the calculations for herbicides in each subdivision described above were used to determine the 10 highest ranked herbicides in the four major categories. This rank, therefore, is a function of both projected usage trends and importance relative to current usage. These are listed in Table 21. The subdivisions listed in parentheses are the ones in which that herbicide ranked highest.

Table 21. Ten Highest Ranked Herbicides[1] in Each of the Four Major Federal/State Land Management Categories.

Category	Herbicide and Subdivision [2]	Category	Herbicide and Subdivision [2]
Forestry	Glyphosate (General, Site Preparation Nurseries)	Noncrop Areas	Glyphosate (General, Aquatic, Wildlife Management, Noxious Weeds)
	Hexazinone (General, Release)		Tebuthiuron (General)
	Oxyfluorfen (Nurseries)		2,4-D (General, Noxious weeds, Aquatic, Wildlife Management, Rights-of-Way)
	2,4-D (Site Preparation, Release)		
	Picloram (General)		Picloram (General, Noxious Weeds, Wildlife Management)
	2,4-D + Picloram (General, Site Preparation, Release)		Sodium metaborate + sodium chlorate + Bromacil (General)
	Triclopyr (Site Preparation)		Tebuthiuron + Trifluralin (General)
	Bifenox (Nurseries, General)		2,4-D + Picloram (General, Noxious Weeds, Wildlife Management)
	Methyl bromide + Chloropicrin (Nurseries)		
	Sethoxydim (Nurseries)		Endothall (Aquatic)
			Diquat (Aquatic)
			Fosamine (Rights-of-Way)
Range	2,4-D (General, Foothill, Arid)	Croplands	Atrazine (Corn, General)
	Picloram (General, Foothill, Mountain)		2,4-D (Wheat, General)
	Glyphosate (General, Foothill, Mountain)		Trifluralin (General, Soybeans)
	2,4-D + Picloram (General, Arid)		Glyphosate (General, Soybeans)
	Dicamba (General, Mountain)		Alachlor (Corn, Soybeans)
	2,4-D + Dicamba (General, Mountain, Arid)		Bentazon (Soybeans, General)
	Tebuthiuron (General, Arid)		Alachlor + Atrazine (Corn)
	Atrazine (General)		Dicamba (Wheat)
	Amitrole (General)		Cyanazine (Corn)
	2,4-D + Atrazine (General)		

[1]Highest ranked herbicides in order of priority were determined by those ranking highest in combined trend and priority when all subdivisions in the category were considered.
[2]The subdivision(s) in which the named herbicide ranked highest.

47

ASSESSMENT OF WEED CONTROL TECHNOLOGY

The third section of the weed survey (Figure 1) requested information on
seven techniques: (1) conservation tillage, (2) no-till, (3) mechanical,
(4) cultural, (5) chemical, (6) biological, and (7) integrated weed
management.

Respondents were requested to supply the percentage of acres under their
management where each of these techniques was used. Because of the variety
of management practices, the number of category subdivisions and differences
of interpretation of acreages under management, however, no meaningful
evaluation could be made; so data on percentage of acreage have not been
included in this report.

Respondents were also asked to rate each of the techniques on a scale of 1 to
10, 1 indicating the least or no need for improved technology in that
technique, a 10 indicating the greatest or urgent need for improvement in
technology.

These data were summarized in the following manner. In each subdivision, the
ratings for needed improvement in each technique were added together and
divided by the number of respondents. This gives an average need for
improvement in each technique as seen by the respondents. In Table 22, this
is shown by two numbers separated by a dash; the number before the dash is
theaverage of the ratings for that technique in that subdivision; the number
after the dash is the total number of respondents for that technique in that
subdivision.

It should be noted that a number of respondents rated "conservation tillage"
and "no-till" as techniques in general forestry and in other subdivisions
that may seem unlikely. These figures undoubtedly reflect a very broad
definition of the technique to indicate the least disturbance of soil and
the maximum retention of surface residue. The terms, in that sense, do not
relate to the specific practices of the same names in agronomic crop
production.

Two kinds of data emerged from the survey of current techniques and needs for
improved technology: highest average ratings, and number of respondents
supplying a rating. In general forestry, respondents indicated the greatest
needs for better technology in chemical, biological, and integrated pest
management techniques. Each of these averaged a rating of 7 on the scale of
1 to 10. Average ratings of 7 were also given to improved IPM for site
preparation and release. Christmas tree growers indicated a need for
improved weed control technology with regard to cultural (8), biological
(10), and IPM (8) techniques. The greatest number of respondents indicated
needed improvements in the areas of mechanical (128) and chemical (124)
controls.

The survey form also provided space for respondents to indicate needs in
addition to the seven listed. Among the additional needs listed were
improved application equipment, better chemical formulations (i.e., granular
and slow release), and greater safety measures. Several respondents also
indicated a need for improvement in informing the public about weed control
and herbicide use.

Table 22. Assessment of Need[1] for Better Weed Control Technology

Category and Subdivision	Weed Management Technique						
	Conservation[2] Tillage	No Till[3]	Mechanical[4]	Cultural[5]	Chemical[6]	Biological[7]	IPM[8]

Total	56	51	56	53	75	51	59

[1] Each respondent to the survey indicated needs for better technology on a scale of 1 to 10 (1= not necessary; 10= urgent). The numbers preceding the dash (-) in each column represent the average of all responses for that technique in that subdivision. The numbers following the dash (-) are the number of respondents.

[2] Conservation tillage minimizes soil disturbance and leaves surface residues.

[3] No till practices avoid soil disturbance from harvest to next planting.

[4] Mechanical practices use cultivators, mowers, brush cutters, etc.

[5] Cultural practices include fertilization, grazing, and prescribed burning.

[6] Chemical practices use conventional herbicides.

[7] Biological practices include the use of parasites, predators, and pathogens.

[8] Integrated pest management is the combined use of two or more weed control techniques.

[9] The number of respondents indicating needs for better technology for each technique.

Rangeland managers gave top priority (average of 9) to improvements needed in the technology of biological control. The greatest number of range management respondents (29) reported needed improvements in chemical controls.

General noncrop-, aquatic-, and noxious-weed control personnel reported their greatest needs (averages of 7, 8, and 9 respectively) for improved technology are in the area of biological control. However, the greatest number (144) of respondents reported that better chemical controls are needed.

Similarly, cropland managers reported highest needs (average of 7) for improvements in biological control but a greater number (75) reported there were needs for improved chemical control technology.

Overall, the highest average need for better technology in forestry, range and noncrop weed management was for integrated pest management. The subdivision average for these activities on the 1 to 10 scale of need for better technology were 6, 6, and 5 respectively.

CONCLUSIONS

Forests and rangelands in the U.S. cover some 1.5 billion acres and for the foreseeable future weeds, trees and herbicides will all continue to be important elements in their management. To determine the current extent of weeds on these lands, to evaluate practices now in use and to estimate future trends of both, a survey of forest and rangeland management personnel was undertaken. From that survey we conclude that in forestry, weeds such as grasses, ceanothus, purslane, bindweed, alder, nutsedge, kudzu, pigweed, leafy spurge and Canadian thistle are going to continue to be of significance because of their current infestation patterns and the difficulty they present in being controlled. As a result, forest managers involved with site preparation, release, nursery management and general forestry want improved technology to aid in their vegetation management programs. Newer herbicides like glyphosate, hexazinone, oxyflourfen, and triclopyr and old stand-bys like 2,4-D and picloram are important in forest managers' fight against these weeds, but newtechnology is being requested in the form of better chemical, biological, andintegrated pest management techniques.

Rangeland managers are likely to continue to be plagued by leafy spurge, thistles, knapweeds, rabbitbrush and tansy ragwort. Several of these have been declared "noxious" by various state leagislatures, and pressure to control them will likely increase. Use of herbicides such as 2,4-D, picloram, gylphosate, dicamba, tebuthiuron and combinations of them are expected to remain at current levels with some upward trends. New technology is desired especially with regard to biological controls. Combinations of techniques in integrated weed management programs are also highly desired.

A variety of noncropland management areas are associated with public lands. The most undesirable weeds and trees identified by survey respondents include: sassafras, persimmon, Canadian thistle, kudzu, Johnsongrass, and leafy spurge. These and other types of undesirable vegetation are expected to continue to hamper public land managers reponsible for maintenance of noncrop public land areas.

Cropland management is not a primary goal on public lands, but where crops are grown to enhance wildlife habitat or maintain historic settings, weeds such as Johnsongrass, cocklebur, bindweed, cheatgrass, foxtail, velvetleaf, and Canadian thistle have resisted attempts to control them. Even with important herbicides like atrazine, 2,4-D, trifluralin, glyphosate, and alachlor in crops like corn, wheat, and soybeans, these weeds persist. Some even show an upward trend in infestation pattern. Consequently public land managers would like improvements in their cropland weed control techniques. Technological improvements are especially indicated in the areas of chemical and biological controls.

Overall, respondents indicated that improvements are needed in the management of weeds and trees, and in the availability and use of herbicides. This summary is intended to provide a source of information that will be useful for establishing future priorities for short- and long-term research planning and for implementing research, development, regulatory, and educational programs related to weeds, trees, and herbicides.
